Vacuum Lifter AERO-WINDOW

Product information

With this vacuum lifter, you can handle glass and windows. Its 3-hole suspension eye compensates the centre of gravity, and the workpiece can be rotated vertically by +/- 90° and fixed every 90° using a Bowden cable.

Thanks to the special AERO-LIFT glass suction plates, which have a low intrinsic volume and a unique structure, the vertical position experiences excellent suction properties and an increased friction coefficient.

The vacuum accumulator is integrated into the frame, and all the suction plates can be switched on and off in seconds via manual slide valves and/or quick-change couplings.

Product variants

The AERO-WINDOW vacuum lifter is available in more versions with:

- Load capacities from 300 kg up to 500 kg
- Different suction plate diameters etc.
